*Abstract*

*Italian phrasal verbs in a didactic perspective*

*In recent years there has been a growing interest in lexical phenomena thanks to the development of information technology and big data that have highlighted phenomena of syntagmatic nature. In such perspective, we here chose to investigate the function of the verb-particle (VP) in Italian. So far, literature privileged the analysis of these verbs' function in the spoken language. The present work concentrates on written language, following the collection of new data based on web results, presenting a list of VPs and a selection of examples. As a conclusion VPs are presented in a didactic perspective emphasizing lexical mistakes and also linguistic phenomena possibly depending on cultural reasons.*
